

music hall

mmf 3.3 turntable

DESCRIPTION

This is Music Hall's first entry-level table utilizing the unique dual-plinth technology originated by music hall. The mmf-3.3 embodies the culmination of over 30 years of research, development, and most important of all, listening. The 3-speed belt driven table was developed for those seeking a perfectly matched set of features with an uncompromising focus on sound performance. The 3.3 is constructed using high quality components and comes complete with a tonearm, cartridge mounted, and dust cover. The 3.3 utilizes the original dual-plinth technology (motor mounted on the lower plinth, main bearing and tonearm mounted on the upper plinth) originated by music hall.

A super-charged 2.3 or scaled down version of the 5.3, truly, this a table we should have had in our line-up for many years. The big advantage to it being released now, is that the 3.3 benefits from years of R&D.

Firstly, it has the new lower noise speed accurate motor. Additionally, the motor has a built-in speed control that allows you to switch between 33, 45, and 78 rpm at the touch of a button. (78 rpm requires a belt change)

The tonearm is a custom carbon tube with bonded alloy headshell. Bonding the alloy headshell to the carbon tube significantly improves the sound over a basic carbon tube as it dramatically increases the stiffness of the tube and acts as a resonance damper for the carbon.

Want proof? Simply try to twist the end of the arm tube with your thumb and forefinger, nothing happens. Try this with other carbon only arms sold at a similar price point and you'll discover the arm tubes twist and bend without much effort.

The arm features high tolerance super smooth ABEC bearings in a 4 point gimbaled bearing configuration for superior tracking. The arm is fully adjustable for VTA and azimuth allowing you to lock in the correct tune regardless of cartridge used.

The table is supplied with the highly regarded Ortofon 2M Red properly mounted and aligned.

3.3's are available in our new classic looking walnut veneer or high gloss piano black lacquer..

mmf 3.3
turntable

TURNTABLE

Drive mechanism

Belt

Suspension / platter

Special vibration damping adjustable feet

Music Hall's unique dual-plinth design – isolating the electronics and motor from the main bearing and tonearm

Speed control

Full-size alloy platter and felt mat

33 1/3, 45, at the touch of a button

78 rpm by changing belt position

Motor

Electronic speed controlled DC motor for superior speed stability, isolated on lower plinth

Bearing

High precision stainless steel and bronze main bearing assembly for quiet fluid operation

TONEARM

Arm

Custom carbon fiber tonearm with alloy headshell for superb tracking ability

User adjustable VTA and azimuth

Counterweight's center of gravity is level with the stylus tip is decoupled from the arm and acts as a resonance damper

Wiring and connectors

Flexible internal tonearm wire drawn from high purity copper

High quality gold RCA connectors with detachable phono cable

CARTRIDGE

Ortofon 2M Red cartridge with replaceable elliptical stylus

ACCESSORIES

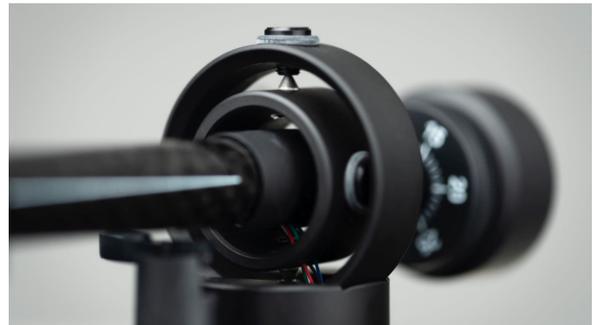

Dust cover

45 rpm adaptor

AVAILABLE FINISH

Piano Black

Walnut Veneer
